Summary

Career changer with 2+ years in purchasing and operations, now focused on software development. I bring a habit of thinking in systems and fixing broken processes — skills that translate well into writing clean, reliable code. Proficient in JavaScript, TypeScript, SQL, Node.js, Express.js, and Next.js. Currently completing the JSD-12 Full-Stack JavaScript Development program at Generation Thailand, where I've been building real applications from scratch.

Experience

Purchasing & Store Officer

Suksawat Industry Co., Ltd. | Thailand | 2022 – 2024

- Managed day-to-day inventory and purchasing to keep operations running smoothly
 - Coordinated with suppliers and internal teams to prevent stock shortages
 - **Cut inventory discrepancies by redesigning the tracking and documentation process**
 - Developed strong analytical habits by solving real supply-chain problems daily
-

Projects

Running E-commerce Web Application (TypeScript / Next.js) — github.com/toonajuig/Running-Ecommerce

- Built a full-stack e-commerce app using Next.js 15 (App Router), Express.js, and PostgreSQL
- Added JWT-based login with separate Admin and User roles
- Created a REST API covering users, products, and orders — all with full CRUD
- Used Docker Compose to spin up the database, keeping local setup consistent

E-commerce Web Application (JavaScript) — github.com/toonajuig/e-commerce-app

- Built a mini e-commerce system with product listing and a working shopping cart
- Organised product data (ID, name, price, stock) to support real purchase logic
- Handled edge cases like out-of-stock items and dynamic price calculations

Database Design (PostgreSQL & MongoDB) — github.com/toonajuig/sql-database-design

- Designed a relational schema for an e-commerce system covering Products, Orders, and Users
- Wrote queries with filtering, sorting, and aggregation to pull meaningful data
- Practised MongoDB alongside SQL to understand how each fits different use cases

CRUD Web Application (JavaScript)

- Built a CRUD app to add, view, update, and delete records through a browser UI
 - Handled DOM events to make the interface respond without page reloads
 - Wired the frontend directly to a structured data source to mimic a real backend
-

Skills

- **Programming:** JavaScript, TypeScript, SQL
 - **Frontend:** HTML5, CSS3, React, Next.js, Tailwind CSS
 - **Backend:** Node.js, Express.js
 - **Database:** PostgreSQL, MongoDB
 - **Tools:** Git, GitHub, VS Code, Docker
 - **Concepts:** REST API, JWT Auth, OOP, Agile/Scrum
-

Education

Bachelor of Business Administration (Management)

Rajamangala University of Technology Lanna

JSD-12 Full-Stack JavaScript Development — Generation Thailand (2026)
